Claims 1-7 and 10-18 are presented for examination.

The amendments and remarks filed on October 24, 2006 have been received and entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 1618

Claims 1-7 and 10-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berger (U.S. Patent 4,574,084) in view of Frangione (U.S. Patent 5,782,992).

Berger teaches a process for the preparation of a stabilized, modified aqueous chlorite solution with a peroxy compound, such as hydrogen peroxide. See the abstract. The concentration of sodium chloride is taught in column 7, lines 66-68. The concentration of peroxy compound is taught in column 2, lines 66-68. Frangione teaches the use of a chlorite compound such as sodium chloride or hydrogen peroxide in a contact lens formulation. See column 2, lines 8-15. The concentration of chlorine dioxide within the claimed range is also taught by the above reference. See column 4, lines 3-15. The use of lubricating polymers is taught in column 5, lines 39-44. The use of surfactants is taught in column 4, lines 40-50. The primary reference differs from the claimed invention in the use of the surfactants and lubricating polymers. It would have been obvious for a person skilled in the art to incorporate a lubricating agent and a surfactant to the primary reference, considering that Frangione teaches the addition of such agents to contact lens composition having sodium chloride or hydrogen peroxide as old.

One skilled in the art would have been motivated to combine the teachings of the above references, since one relates to the use of hydrogen peroxide and a chlorite compound in a pharmaceutical formulation and the other relates to the use of surfactants and lubricating polymers to ophthalmic formulations as old. Applicant has presented no evidence to establish the unexpected or unobvious nature of the claimed invention, and as such, claims 1-7 and 11-18 are properly rejected under 35 U.S.C. 103.
